

Pacific Lighthouse Stamps

Available by Mail

Established in 1899, Diamond Head Lighthouse sits at the base of an active volcano on the island of Oahu. Currently, it serves as home to the 14th Coast Guard district commander, and is the last occupied light station in Hawaii.

Five Finger Lighthouse stands on a small island just south of Juneau, Alaska. In 1935 the concrete Art Deco-style tower was erected, replacing the wooden tower destroyed by fire in 1933. Automated in 1984, it has recently been added to the National Register of historic places.

At 107 feet, Grays Harbor Lighthouse is the tallest lighthouse in the state of Washington, and one of the tallest on the Pacific Coast. Dedicated in 1898, this white octagonal tower, with its distinctive red and white beams of light, continues to mark the entrance to Grays Harbor.

The first Umpqua River Lighthouse was the first tower of its kind built in the Oregon Territory. Erosion caused it to collapse in 1864 and the current 65-foot masonry tower was built on higher ground 30 years later. It's two beams of white and one beam of red light can be seen from 21 miles away.

St. George Reef Lighthouse took 10 years to build. The building is perched on an exposed rock off the coast of northern California near Crescent City. Due to extreme erosion, maintenance became highly expensive, and duty too dangerous. So, the light was deactivated in 1975. In an attempt to restore it, the Georgia Reef Lighthouse Society replaced the lens in 2002, and successfully nominated to the National Register of Historical Places.
